

TShed Lunax Starlight HD Underwater System

nickturner, Wednesday 22 January 2014 - 09:56:00

Work on putting our Starlight HD Cameras underwater is complete and the system is now available for hire to producers interested in opening up new areas of marine film-making. The system consists of a specially adapted underwater housing engineered in collaboration with world leading underwater cameraman Doug Anderson which will allow divers to film previously unseen nocturnal marine behaviour without the need for white lighting, such as bioluminescence and nocturnal predation. Please call or email for more information.
